NAME

bash_avpres -- Installed commands provided by "Bash AVpres"

SYNOPSIS

bash_avpres

DESCRIPTION

Bash_AVpres is a collection of Bash scripts for audio-visual preservation. One of these small programs is **bash_avpres** which lists the installed commands provided by the set.

NOTES

The majority of the **Bash_AVpres** scripts work correcly with Bash from version 3.2 (released back on 2006-10-11), but at least version 4.3 (released on 2014-02-27) is required for **metadata_csv** and **name_hash**. However, we strongly advise using the current version 5.3.9 (released on 2025-12-10).

Bash_AVpres has been successfully tested on modern x86-64 (AMD64) and AArch64 (ARM64) architectures, running the following operating systems:

Linux: Debian 13.4, 12.13 and 11.11
Linux: Ubuntu 26.04 LTS, 24.04.4 LTS and 22.04.5 LTS

Macintosh: macOS 26.4.1, 15.7.5 and 14.8.5

Windows 11 version 26H1, 25H2, 24H2 and 23H2 running Subsystem for Linux (WSL 2.6.3)

LOG FILES

Temporary log files are stored at
/tmp/AVpres/bash_avpres.XXXXXXXXXX

The log files can be used for debugging:

cat /tmp/AVpres/bash_avpres.*XXXXXXXXXX*
