24

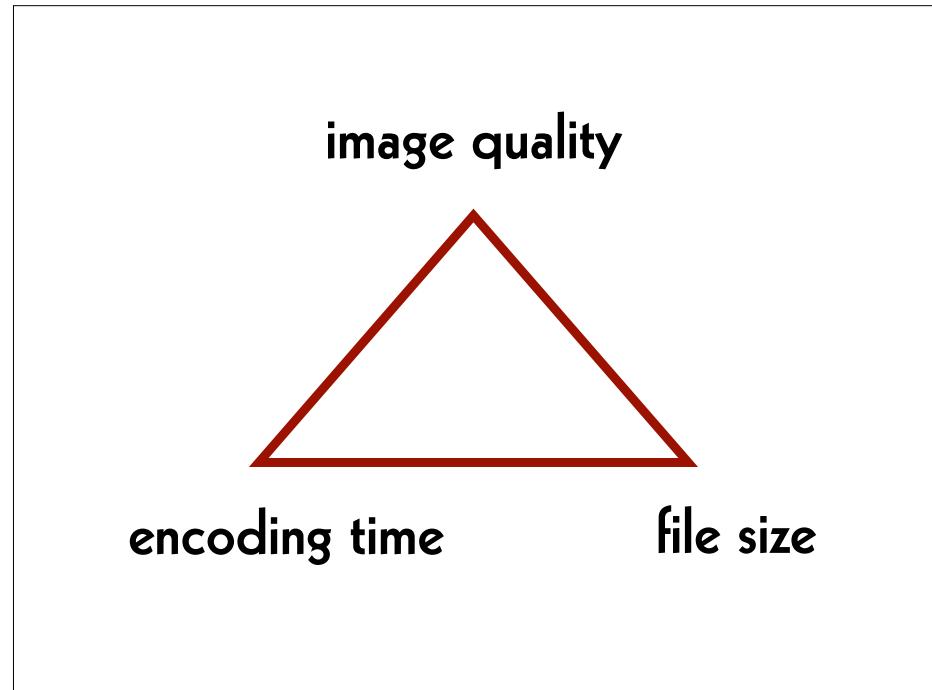

25

Compression

- uncompressed
- lossless compression
- lossy compression
- chroma subsampling
- born compressed

27

26

Uncompressed

- + data simpler to process
- + software runs faster
- bigger files
- slower writing, transmission and reading

Examples: TIFF, DPX, DNG, OpenEXR

28

Lossless Compression

- + smaller files
- + faster writing, transmission and reading
- data processing complexer
- software runs slower

Examples: JPEG 2000, FFV1

29

Chroma Subsampling

- 4:2:2
- 4:2:0 / 4:1:1

31

Lossy Compression

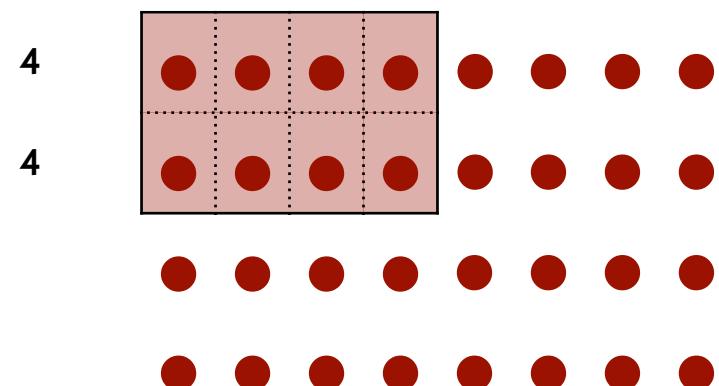

- optimised for image acquisition and/or postproduction
- optimised for access

Examples (mezzanine): ProRes 422, ProRes 4444; DNxHD, DNxHR

Examples (access): H.264 (AVC), H.265 (HEVC), H.266 (VVC); AV1

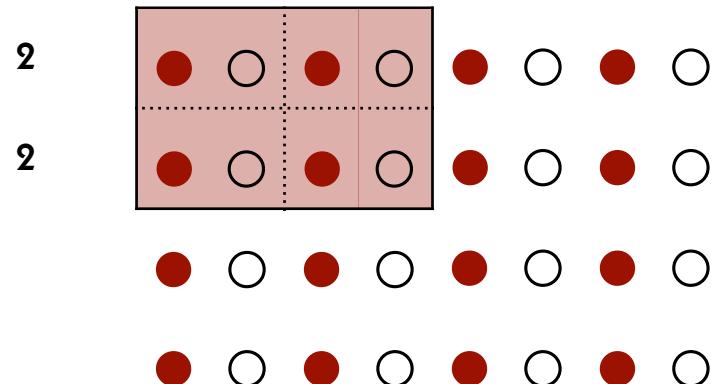

30

4:4:4

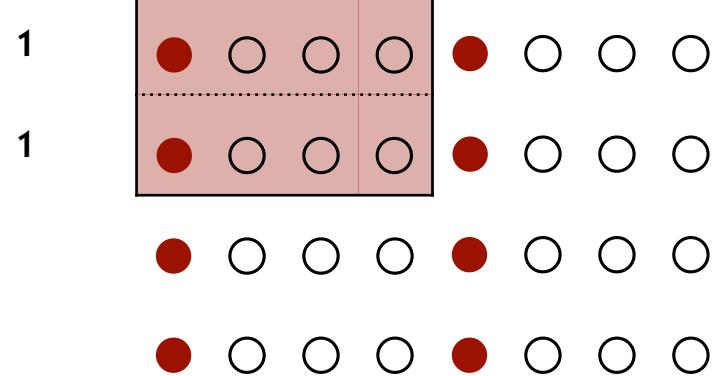

32

4:2:2

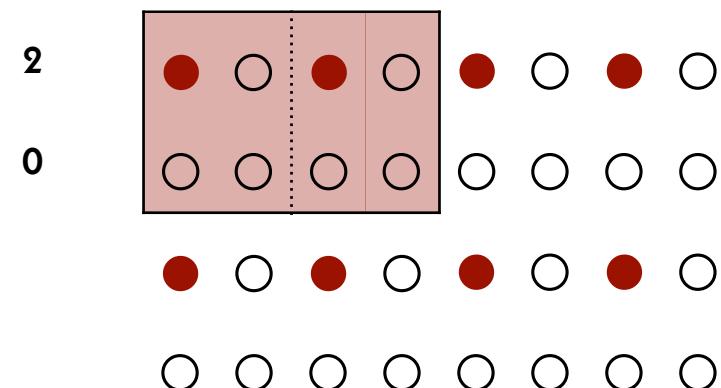

33

4:1:1

35

4:2:0

34

Born Compressed

- optimised for both image acquisition and postproduction

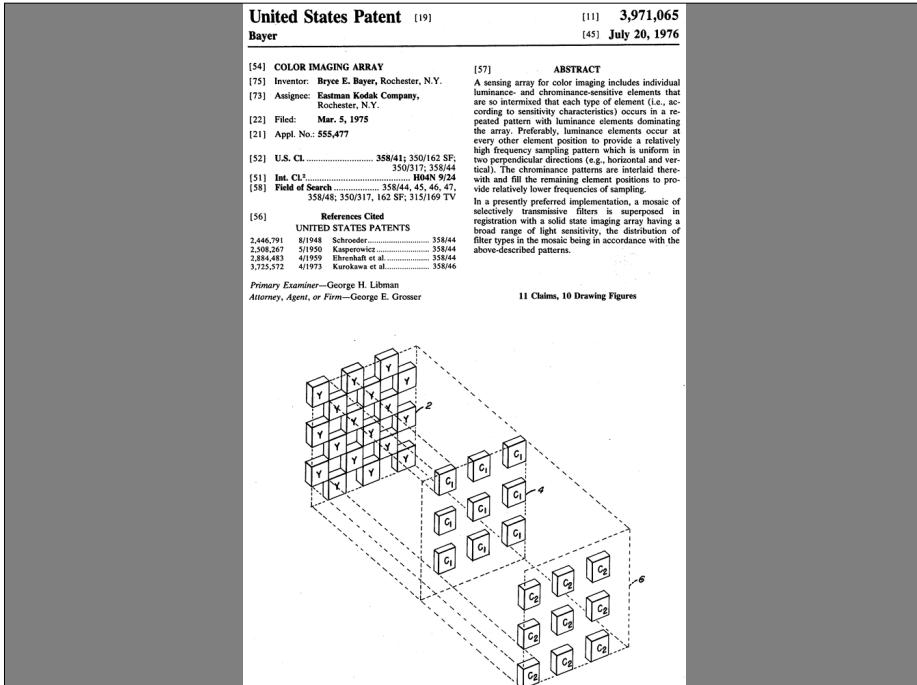

Examples: CineForm RAW, ProRes RAW, Blackmagic RAW

36

Uncomfortable Truths

- sensors are colour blind
- Bayer sensors do not generate full RGB

Live in the real world!

There is only one efficient way:

- keep the analogue source elements as long as possible
- more prevention:
 - better insulation
 - more efficient air conditioning
- less handling of the source elements
- make digital masters and access copies
